

# SLICE

CLEANER

## CUSTOMER: LARGE INDUSTRIAL MANUFACTURER

**PRODUCT**

**Slice** is a biodegradable, water soluble, heavy duty cleaner-degreaser formulated with an exceptional mild yet tough multi-component surfactant emulsifier system designed to achieve superior cleaning and degreasing capabilities. Slice has also been formulated to provide residue free surfaces without sticky or slick films. Slice has a natural, pleasant citrus odor. The absence of any petroleum hydrocarbons in Slice allows disposal after soil release into properly operating effluent treatment plants.

Slice is ideally suited for facilities requiring a high degree of cleanliness on their ferrous materials and hard surfaces. Slice should always be added to the water in the washer.

**PROCESS AND EQUIPMENT**

Industry/Market	Industrial
Product Type	Cleaner
Product Number	4555000000
Machinery Involved	Jet Washes and Manual Mop
Description of Environment	Used to degrease various articles from engines to machines.
Volume Used	10,000 per year
Date of Use	2014 to present
Documented Cost Savings	Reduced consumption by 50%

▷ **DESCRIPTION OF PROBLEM**

Previously used cleaners had to be used at high concentrations to achieve the desired results, leading to a high cost to the customer. There have been instances where the cleaners have been used at low concentrations to wash engines after test, but have caused the ferrous components to rust after cleaning.

▷ **SOLUTION**

The Slice can be used up to five times leaner than the previously used cleaners for degreasing engines, machines, washing floors and other components and at low concentrations still has suitable corrosion inhibition.

▷ **CUSTOMER TESTIMONIAL**

The Slice has both improved the performance and reduced the spend on the multi-purpose degreaser.
